Education

Imperial College London, MSc Applied Computational Science and Engineering 2026- 2027

Key Modules: Data Science and Machine Learning, Advanced Programming, Modelling and Numerical Methods, Computational Maths

University of Warwick, BSc(Hons) Computer Science 2022- 2025

Key Modules: Programming in Java, Algorithms, Software Engineering, Artificial Intelligence, Operating Systems and Computer Networks.

Brampton Manor Academy 2020– 2022

A-Levels: Mathematics (A*), Chemistry (A*), Economics (A*)

Oasis Academy Silvertown 2015 – 2020

GCSEs: (9,9,9,9,9,9,9,8) including 9s in **Mathematics** and **English Language**

Skills

- **Programming Languages:** Java, Python, JavaScript
- **Backend, Frameworks, Systems & Tools:** Java SpringBoot, Flask, FastAPI, MyBatis, REST APIs, Git, Jenkins, GitHub Actions, Linux, Windows, MacOS
- **Databases:** SQLAlchemy, PostgreSQL
- **Frontend:** React, React Native, HTML/CSS, Bootstrap
- **Scientific Libraries:** NumPy, Pandas, Scikit-learn, Transformers (BERT), Matplotlib

Experience

Project Ndiyan, Lead Engineer - Software & Data Architecture (Part-time) AUG 2026 - Present

- Leading software and data architecture and implementation for a climate-tech startup, designing IoT sensor infrastructure and building a real-time data dashboard, and flood-alerting system for residents and government stakeholders.
- Building the backend in Python and FastAPI, integrating proprietary IoT hardware and sensor telemetry into the dashboard and alerting interface.
- Presenting product demos to investors and government bodies as part of ongoing stakeholder engagement and fundraising ([projectndiyan.com](#)).

JPMorganChase, Cybersecurity Engineer SEP 2025 - JUN 2026

- Investigated suspicious activity through analysis of high-volume security logs and alerts in Splunk across AWS, GCP, and enterprise environments, enabling timely remediation of threats.
- Reduced alert triage time by 50%+ by implementing automations and SOAR workflows in Python, reducing a large manual workload.
- Investigated the feasibility of Machine Learning–based alert grouping to further reduce triage time, laying groundwork for future automation.

JPMorganChase, Machine Learning Engineer JUN 2024 - AUG 2024

- Developed a model that automatically classifies user-reported application bug tickets to the correct in-house teams to eliminate the slow and error-prone manual assignment, which previously delayed fixes and hurt user experience.
- Retrieved ticket data via an internal API and performed data analysis and processing to prepare it for training the BERT-based LLM, handling significant class imbalance across the 35 teams.
- Achieved $\geq 75\%$ accuracy, precision, recall, and F1-score despite class imbalances, reducing assignment errors and delays, and improving user experience.

SEO London, Full Stack Software Engineer JUN 2023 - SEP 2023

- Addressed the risk of phishing/malicious links by developing a full-stack web application (Python/Flask backend, SQLAlchemy, responsive frontend) that lets users verify URL safety in real time using Google's Safe Browsing API.
- Deployed the app live ([checkurls.pythonanywhere.com](#)) implementing unit tests and automating them via GitHub Actions CI, with usage by peers at SEO London.

Jane Street, First-Year Trading and Technology Program Participant, Developer MAR 2023

- Placed 1st in an Estimathon (mathematical puzzle-solving) and 2nd in an Electronic Trading Competition, working in a team to design and optimise a Python trading bot using algorithmic strategies for trading financial instruments.

Projects

Full-stack Rewards Application SEP 2025 - OCT 2025

Tech Stack: React, Java Spring Boot, MyBatis, Jenkins

- Contributed across the stack on a collaborative project, designing database schemas, implementing business logic in Java Spring Boot, and managing data persistence with MyBatis, alongside frontend work in React to build a rewards platform that converts card transactions into redeemable points for rewards.

AI and NLP-Powered Course Recommendation and Improvement Platform OCT 2024 - APR 2025

Tech Stack: React Native, Python (Flask), NLP/ML, [code repository](#)

- Addressed the challenge of interpreting large volumes of student feedback by building a full-stack mobile/web app (React Native, Python-Flask) to help students make data-driven course enrollment decisions and give teachers actionable improvement recommendations.
- Applied ML/NLP techniques (text classification, sentiment analysis, emotion classification, and topic modelling) to extract insights from student feedback, and integrated Google Gemini AI for dynamic teacher suggestions.
- Achieved first-class recognition and a publication nomination for the European Conference on Technology Enhanced Learning 2025.

Extracurricular Activities, Awards & Responsibilities

Ada Lovelace Scholarship for Women

2026- 2027

- Awarded full scholarship for MSc study at Imperial College London due to exceptional academic merit.

JPMorganChase Code for Good Hackathon

NOV 2024

- Built a tool to help the Make-A-Wish Foundation match wish providers to individuals and locations, addressing inefficient wish allocation. Led UI design and implementation in React.js and integration with backend services via Google Firebase.

Google BGN Hackathon

OCT 2023

- Built a web app (SQLAlchemy database, Bootstrap/HTML/JS frontend) to help first-year students discover events and reduce loneliness, ranking among the top 5 most popular applications at the hackathon.

Generating Genius D&I Mentoring Platform

AUG 2023 - SEP 2023

Tech Stack: **React.js** [code repository](#)

- Nominated by Generating Genius to develop and present a Diversity & Inclusion mentoring platform to corporate stakeholders at HSBC and National Grid.
- Designed the platform's frontend UI in React, gaining experience in UI design, front-end development, and presenting technical work to corporate audiences

Generating Genius Top 100 Future STEM Leader

FEB 2021 - AUG 2022

- Selected as one of the Top 100 Year 12s in the UK (unranked) as having exceptional academic and career potential in STEM.

Kent Maps Online Project Volunteer

JAN 2021 - JUL 2021

- Improved user engagement on the Kent Maps Online website (<https://www.kent-maps.online/>) by developing interactive features (dynamic maps, moving images) and authoring/proofreading published articles.
